

Hands-On WEEK-9 DAY-43 Keerthivasan R

Background

A software company is developing a web-based Employee Management System. Requirements are evolving, and the team faces:

- Miscommunication between developers and stakeholders
 - Delayed feature releases
 - Unclear task ownership
 - No visibility of project progress
 - Difficulty managing team coordination
-

Problem

The company needs a structured Agile framework to:

- Organize team roles clearly
 - Manage work in short cycles
 - Track progress transparently
 - Deliver features incrementally
 - Improve team accountability
-

Proposed Solution

Adopt the **Scrum Framework**, which includes:

Roles

- Product Owner
- Scrum Master
- Development Team

Events

- Sprint Planning
- Daily Scrum
- Sprint Review
- Sprint Retrospective

Artifacts

- Product Backlog
- Sprint Backlog
- Increment

Scrum divides the project into short time-boxed iterations called **Sprints** (2–4 weeks), ensuring continuous delivery and improvement.

Expected Outcomes

By implementing Agile and Scrum:

- Faster delivery of working software
- Improved customer satisfaction
- Better requirement management
- Increased team productivity
- Reduced project risk
