

Week-6:(DAY-27) Hands-On – Keerthivasan R

Problem 1 – Creating Your First ASP.NET Core MVC Application

Scenario:

A startup wants a basic web application to display a welcome message for users accessing their platform.

Requirements:

1. Create a new ASP.NET Core MVC project.
2. Run the application successfully.
3. Modify the default Home page to display:
 - a. "Welcome to My First ASP.NET Core App"
4. Change the application title.

Technical Constraints:

- Use ASP.NET Core 8 MVC template
- Use Visual Studio or .NET CLI (`dotnet new mvc`)
- Do NOT delete default project structure

Expectations:

- Project runs without errors
- Default routing works
- UI reflects updated message

Program Flow:

User Request → Default Route → HomeController → View → Response

Learning Outcome:

- Understand project structure
- Learn how to run ASP.NET Core apps
- Get familiar with MVC template

OUTPUT:

```

My App Home Privacy

Welcome to My First ASP.NET Core App

create a product app and get all products using MVC

CODE:

Models/Product.cs

```
namespace ProductMvcApp.Models
{
    public class Product
    {
        public int Id { get; set; }
        public string Name { get; set; }
        public double Price { get; set; }
    }
}
```

Controllers/ProductController.cs

```
using Microsoft.AspNetCore.Mvc;
using ProductMvcApp.Models;
using System.Collections.Generic;

namespace ProductMvcApp.Controllers
{
    public class ProductController : Controller
    {
        public IActionResult Index()
        {
            // Dummy data (no database)
            List<Product> products = new List<Product>
            {
                new Product { Id = 1, Name = "Laptop", Price = 50000 },
                new Product { Id = 2, Name = "Mobile", Price = 20000 },
                new Product { Id = 3, Name = "Headphones", Price = 3000 }
            };

            return View(products);
        }
    }
}
```

Views/Product/Index.cshtml

```
@model List<ProductMvcApp.Models.Product>

<h2>Product List</h2>
<table border="1">
    <tr>
        <th>Id</th>
        <th>Name</th>
        <th>Price</th>
    </tr>
    @foreach (var item in Model)
    {
        <tr>
            <td>@item.Id</td>
            <td>@item.Name</td>
            <td>@item.Price</td>
        </tr>
    }
</table>
```
